

Tomcat® Glue Boards represent the very latest in glue trap technology. Our glue formulation has the ideal combination of immediate grip and stretchable hold.

Tomcat® Glue Boards work without mechanical apparatus. Once the targeted pest (cockroaches, scorpions, spiders, ants, mice, etc.) scurry onto the tray, they will get stuck. Simply dispose of the entire glue board.

DIRECTIONS:

- Remove release paper from Tomcat® Glue Boards.
- Place Glue Boards where pests will most likely cross over them – areas where evidence of pest has been observed.
- To increase effectiveness, block passageways to force travel directly over Tomcat® Glue Boards.

IMPORTANT:

- Avoid using Tomcat® Glue Boards in wet areas. Dispose of pest and Glue Board completely. Do not place Glue Boards where there is a possibility of birds or non-target animals coming in contact with adhesive.
- If accidentally contacted, remove with mineral spirits followed with washing with warm water and mild detergents.
